

The background of the slide features a photograph of a modern skyscraper with a glass and steel facade, set against a bright sky. In the foreground, a man wearing glasses and a suit is seen from the side, looking down at his smartphone. The overall composition is split vertically, with the company logo and text on the left and the man on the right.

ARQuant Management

'It always seems impossible until it's done'
– Nelson Mandela

Value Proposition

1. In 2019-2020 our strategy far outperforms the US stock market (S&P 500) and the largest hedge funds with equity long/short strategies
2. The strategy ensures high absolute return (alpha)
3. The strategy has low beta
4. Risks are under control – low drawdowns, fast recovery, Sharpe above 1.5 and Calmar above 2.8

Our Team

Alexander Semenyaka

In 1987 graduated with honors from the Faculty of Computational Mathematics and Cybernetics of Lomonosov Moscow State University, Ph.D. He organized the sale of shares at privatization auctions, debut ADR placements of Gazprom and launch mortgage securitization in Russia.

In 2018 Alexander got MSc in leadership and strategy from London Business School and in 2020 received a certificate from EDHEC business school on asset management using machine learning. Since 2018, he has been selecting and testing unique algorithmic strategies.

Andrew Kartashov

In 2000 graduated with honors from the Faculty of Mechanics and Mathematics of Lomonosov Moscow State University. After he worked as a programmer, lead programmer and head of division in Russian IT companies.

In 2008, Andrew began trading on the Moscow Exchange with his own money and since 2010 his trading is exclusively run by robots. In March 2018, he launched robotic stock trading on US exchanges.

Dmitry Turevskiy

In 2000 graduated from the Faculty of Mechanics and Mathematics of Lomonosov Moscow State University. Worked as a lead developer, project manager and head of the IT department in software development and fintech companies.

Since 2014 is heavily involved in development of algorithmic trading software with strong emphasis on financial and mathematical statistics.

Engine of the Strategy

The Strategy takes long and short positions in selected US stocks traded on NYSE and Nasdaq. Stock selection is updated quarterly. All investments are short-term, average holding period is about 5 business days. Technical analysis and statistical pattern recognition are used to predict a directional movement.

The main statistical pattern is momentum. The system automatically compares a current momentum with all the available historical data on this and other stocks to understand the possible distribution of future movements. This statistical distribution is then compared to the leverage and direction that is going to be used on this stock in this moment.

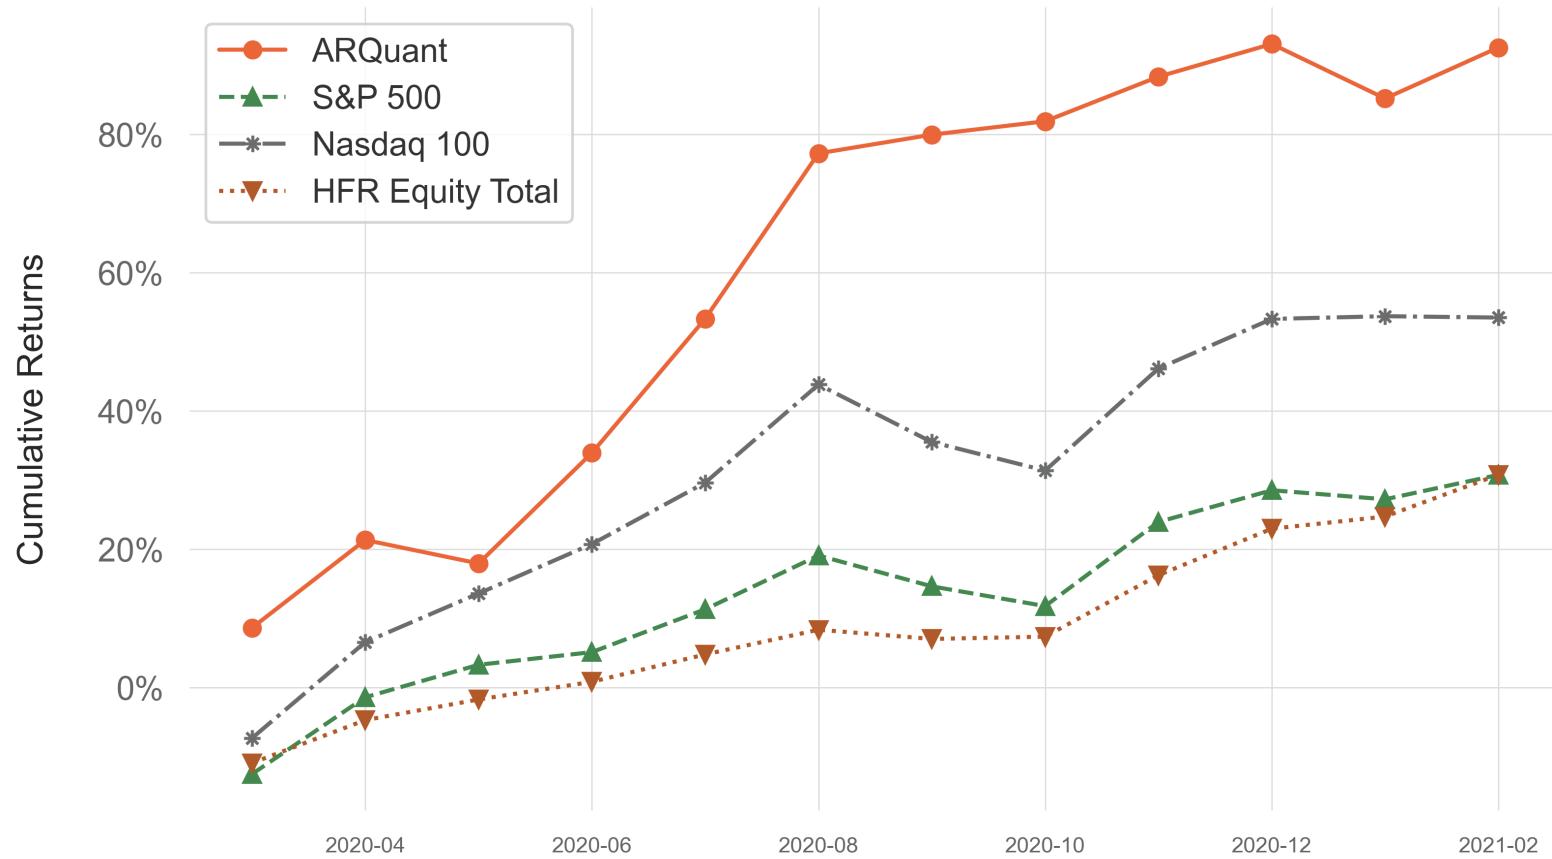

Another pattern used is current volatility. Again, the algorithm analyses historical data to understand where a particular stock can move and what are possible dispersion of future movements.

The Strategy has a built-in procedure to manage the drawdown risk – every day it verifies the current drawdown and adjusts leverage.

Disclosure

This marketing material is not intended for wide distribution and is not intended to advertise financial services and securities or related financial instruments to an unlimited group of persons; it is intended for the named recipients. All recipients of this marketing material are persons with professional experience in matters related to investments or persons with a high level of equity capital or other persons to whom this marketing material may be legally addressed (all the above categories of persons are hereinafter referred to as the "designated recipients"). This material may not be used by persons who are not the said recipients of the material. Any type of investment or investment activity referred to in this material is available only to the named recipients of the material and is related only to the named recipients of the material. The securities described in this marketing material may not be available for sale in all jurisdictions or to certain categories of investors. Derivative financial instruments (options, futures, etc.) are not suitable for all investors and trading in these instruments is considered risky. past performance is not a guarantee of future results. The value of the investment may fall or rise and the investor may not be able to recover the amount of the initial investment. Some investments may become unfeasible due to the illiquidity of the securities market or the absence of a secondary market for the investor's interest, and therefore the evaluation of the investment and the determination of the investor's risk may not be quantifiable. Investments in illiquid securities involve a high degree of risk and are acceptable only to experienced investors who are insensitive to such risks and do not require an easy and quick conversion of investments into cash. Foreign currency-denominated securities are subject to exchange rate fluctuations, which can have a negative impact on the value or price of the investment as well as the income earned from the investment. Other risk factors affecting the price, value or income of an investment include, but are not necessarily limited to, political risks, economic risks, credit risks and market risks. Investments in emerging markets such as Russia, other CIS countries and emerging market securities have a high degree of risk and investors should undertake a thorough preliminary survey before investing.
